

```
public class Main {  
  
    public static void main(String[] args) {  
        Tree tree = new Tree();  
    }  
}
```

```
public class Tree {  
    Node root;  
    public Tree() {  
        root = new Node();  
    }  
}
```

```
public class Node {  
    int content;  
  
    public Node() {  
        Node left = new Node();  
        Node right = new Node();  
    }  
  
    public int returnContent() {  
        return content;  
    }  
  
    public void setContent(int in) {  
        content = in;  
    }  
}
```
